Trends in the Use of Intracytoplasmic Sperm Injection in the United States

Tarun Jain, M.D., *et al.*

ABSTRACT

CONCLUSIONS

Since 1995, the use of ICSI in the United States has increased dramatically, while the proportion of patients receiving treatment for male-factor infertility has remained stable. State-mandated health insurance coverage for IVF services is associated with greater use of ICSI for infertility that is not attributed to male-factor conditions.

Trends in Embryo-Transfer Practice and in Outcomes of the Use of Assisted Reproductive Technology in the United States

Tarun Jain, M.D., *et al.*

ABSTRACT

CONCLUSIONS

Since 1997 in the United States, there have been consistent decreases in both the number of embryos transferred per cycle and the percentage of pregnancies with three or more fetuses, as well as a consistent increase in the percentage of live births per cycle.

Insurance Coverage and Outcomes of In Vitro Fertilization

Tarun Jain, M.D., *et al.*

ABSTRACT

CONCLUSIONS

State-mandated insurance coverage for in vitro fertilization services is associated with increased utilization of these services but with decreases in the number of embryos transferred per cycle, the percentage of cycles resulting in pregnancy, and the percentage of pregnancies with three or more fetuses.
